

Qumu and CaptionHub

Fully Integrated Video Transcription and Translation

CaptionHub is a tool that allows global companies to extend the reach and engagement of enterprise video assets, by quickly and easily adding captions in multiple languages. Fully integrated with the Qumu Enterprise Video platform, users can create frame accurate captions—at broadcast quality—in over 50 languages.

Global organizations can now transcribe, translate, edit and publish captions to their video assets—in both original and translated languages—for maximum audience reach and accessibility.

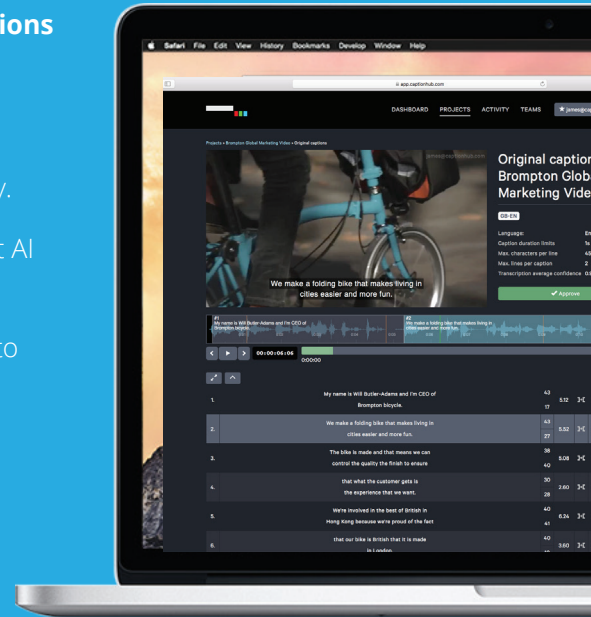

Transcribe video using speech recognition and **Natural Captions Technology**[®], adding captions at broadcast level frame accuracy for perfect timing and accuracy.

Translate video captions into 54 languages within seconds, using state-of-the-art AI Neural Machine Translation, creating near human translations.

Edit within the CaptionHub editor and workflow tools, and use your own linguist to perfect transcriptions and translations.

Publish captioned videos directly to the Qumu Enterprise Video Platform.

Export timed text in multiple formats, including VTT, SRT, TTML / DFXP, CSV, TXT, SMI, EBU-STL, ASS & SCC.

Why Qumu and CaptionHub

Create and publish broadcast quality captions

Seamlessly integrate for total control, security and visibility

Meet FCC accessibility regulatory obligations for captions

Deliver global value faster by translating in up to 54 languages—and perfect them with your own translators

Speed up captioning with the most advanced neural translation & speech recognition available

Natural Captions Technology[®] is an advanced algorithmic approach to natural language processing that reflects the natural language of humans. This results in captions that are perfectly timed, and reflect the way a human speaks as closely as possible.
