# Cloud and Hybrid Service Packages
## Bundled Offerings From the Qumu Professional Services Team

## Professional Services Overview

The Qumu Professional Services team is an experienced, globally-distributed group of enterprise video experts that can provide a full suite of implementation and optimization services for Qumu clients.

Our team includes Architects, Consultants and Project Managers, and all of them share the same goal: to increase the return on enterprise video platform investments thru hands-on implementation services, support, testing, training, integration, migration and system audits.

QUMU PROFESSIONAL SERVICE
TEAM EXPERIENCE (IN YEARS)

| QUMU EXPERTISE | 35+ |
| IT EXPERTISE | 100+ |
| BROADCASTING EXPERTISE | 60+ |

## Cloud and Hybrid Service Packages

### eCDN Design Package
Qumu will design a customized video deployment architecture that enables high quality video delivery to all employees across the enterprise, with no network strain. Includes analysis of network topology and collection of key information related to employees per office location, public IP addresses, bandwidth use, and available bandwidth.

### Video Conference Streaming Package
Qumu will enable video streaming directly out of any or all existing video conferencing applications. This package will allow video conferencing users to record, store, secure and distribute video assets that originate from conferencing systems—as well as extend the engagement of video assets through AI services like speech search, transcription, translation and closed captioning.

### Video Portal Package
Qumu will build and customize a new branded video portal for the storage and distribution of video assets, or refresh an existing portal with your corporate brand.

### Webcasting Registration Package
Qumu will build a customize event registration process and landing page for your next high profile live event, incorporating the needs of both registrants and event administrators.

### Content Migration Package
Qumu will collaborate with your stakeholders to collect and catalog video assets, ingest them into Qumu Cloud, and optimize them for both search and deliver to internal or external audiences—allowing your organization to leverage Qumu Cloud as its sole content management system for video assets.
